USER MANUAL

Scope of Use

Installation of all products should adhere to the manufacturer's guidelines, as well as comply with PCA, AS/NZS3500 standards, and any other relevant regulatory provisions. This product range complies with the Lead Free requirements of the National Construction Code Volume Three.

- **Installation:** Refer to the installation instructions included within this manual
- **Water quality:** In line strainer (supplied) must be installed to ensure water quality
- **Suitable for indoor use**
- **Temperature recommendation:**
 - Single temperature up to: 50°C
 - Dual temperature up to: 80°C
 - Minimum temperature: 5°C
- **Mounting:** Wall, bench or in line installation

Technical Information

Material	Zero Lead Stainless Steel 304
Cartridge	• Ceramic Disc: GPJ1200 & GPJ1200C • Ceramic Disc (Quarter Turn): GPJ1500 & GPJ5600
Cartridge Size	• 35mm: GPJ1200 & GPJ1200C • 15mm: GPJ1500 & GPJ5600
Inlet	15 mm Female
Flow Style	Blade Spray / Laminar Flow
Working Pressure	150kPa - 500kPa
Manufacturers Recommended Pressure	350 kPa
Working Temperature	5°C - 80°C
Finish	Brushed
Servicing	Preventative Maintenance

USER MANUAL

Installation Steps

MIXER BODY INSTALLATION STEPS

Important Note

The mixer must be installed in accordance with the requirements of the NCC Vol3 and AS/NZS3500 by a suitably qualified and licensed plumber. This product comes factory assembled and tested for optimum service life and performance. Water supply lines must be thoroughly flushed before connecting the assembly. Isolating stop cocks should be installed at the heated and cold water connection points for ease of servicing.

- Step 1. Place the base O-Ring (33) on the underside of the mixer body (15).
- Step 2. Screw in the hot and cold flexible connectors (37) to the mixer body (15).
- Step 3. Place the mixer unit over the prepunched tap hole (35mm) in the counter top. Feed the flexible connectors (37) through first.

Note: The unit must be installed with the main mixer handle to the right side.

- Step 4. From underneath the counter top, slide on the U-shaped washer then the U-shaped fixing plate. (34 & 35)
- Step 5. Screw on the hex nuts (36) until the mixer base is firmly fixed to the sink. Tighten with a socket set or tube spanner.
- Step 6. Connect the hot and cold flexible connectors to the isolation valves.
- Step 7. Turn on water supply and check for leaks.
- Step 8. Activate mixer handle, pot filler handle and spray gun to verify operation.

Important Information

- See the detailed wall support installation on page 8.
- See the detailed spring and trigger spray installation on page 9.
- Misuse of the product is not covered by warranty.
- Water pressure exceeding 500kPa may affect the operational life of the product.

WALL BRACKET INSTALLATION STEPS

The Wall Bracket Installation is an essential part for the correct operation and use of the Stainless Steel Pre Rinse Unit.

Step 1. Measure and cut the wall support bar (6) to a length with a 2 to 5mm gap from the wall.

Step 2. Fit the O-Ring (9) to the groove on the fixing wall plate (11).

Step 3. Slide on the chrome cover flange (7), nut (8), brass olive (10) & wall fixing plate (11) onto the wall support bar (6).

Step 4. Swing the wall support bar into position and mark the three holes for drilling into the wall.

Step 5. Swing the wall support bar to the left or right to enable the three holes to be drilled.

Step 6. Swing the wall support bracket back into position, line up the holes and screw the fixing plate back to the wall. Tighten the brass nut and olive, ensuring a firm and solid installation. Slide the chrome cover plate over the wall plate.

Note: For a stainless steel splashback and/or cool room panel wall, ensure the fixing method used results in a solid fixing.

* For a masonry wall use the wall anchors provided (13) with screws (12).

* For a timber backed wall use the screws provided (12).

Important Information

- The wall support bar (6) can slide up or down to the desired height by slowly twisting it back and forth while moving it in the desired position.
- The wall support bar (6) should be installed as high as possible. This wall support bar should be cut to fit the desired distance to the wall.

USER MANUAL

SPRING AND TRIGGER SPRAY

For Optimum Performance and Durability

Conduct service inspections at regular intervals especially in high usage areas will assist in optimising the operational life of the product.

Ensure the Blade Spray nozzle outlet is inspected and cleaned at regular intervals to maintain the units water spray efficiency and effectiveness.

When not in use, the mixer cartridge must be fully closed so as not to leave the pot filler, trigger spray and hose under constant hydrostatic pressure.

Best practices to keep your unit as new

- The mixer must be installed in accordance with the requirements of the NCC Vol3 and AS/NZS3500 and maintenance undertaken by a suitably qualified licensed plumber.
- When not in use, the mixer cartridge must be fully closed so as not to leave the pot filler, trigger spray and hose under constant hydrostatic pressure.
- Do not kink the flexible trigger spray hose during use as this may result in premature failure and void warranty.
- For optimum operational life, the installation of a PRV set to 450kPa is recommended
- Ensure that the wall bracket is periodically inspected to ensure that it remains firmly attached to the wall.
- Ensure the "instruction sticker" supplied with the unit is installed and placed in a suitable position so that it is visible to the user.

Turn mixer off when not in use to avoid pressure build-up at pot filler and trigger spray

Cleaning & Maintenance

To minimise downtime and maximise the functional life of the product, GENTEC recommends servicing your product at least every 12 months, under heavy use may need to be checked and serviced more often.

- The product must be handled carefully to avoid causing any physical damage.
- Use the product at least once every week to ensure all parts are kept lubricated and functioning properly.
- Service the product at least once a year to avoid any product failures - The service timeline provided is based on normal use. More frequent servicing may be required for heavy usage.
- A working pressure of 350kPa is highly recommended to ensure the maximum up-time of the product.
- Regularly clean the product with a soft cloth with warm soapy water, wash off with warm water and dry off with a soft dry cloth, paying attention to removing the dust and contamination in the bends and joints is highly recommended.
- Abrasives, hard clothes, strong acids, and bleaches must be avoided when cleaning all GENTEC products.
- Installation must be completed by a qualified and licenced plumber and adhere to AS/NZS3500 and manufacturer's recommendations.

Parts	Product Name

Troubleshooting

Problem	Cause	How to Fix
Tap is not shutting off	<ul style="list-style-type: none">• Debris• Grease/ lubricants• High pressure	<ul style="list-style-type: none">• Have you flushed the water line for a minimum of 1 minute before connecting the water• Have you installed the strainer and flow controller if provided• If debris has gone through the cartridge this is more than likely to be the cause. If the ceramic disc is broken or damaged, then the cartridge must be replaced• Have you checked to make sure the pressure is to manufacturer's recommendations and in line with the plumbing code
Issue with water flow	<ul style="list-style-type: none">• Not enough water• Too much/ little water	<ul style="list-style-type: none">• Check for blockage in the inlet where the strainer is fitted or is the aerators blocked with debris• Is the isolating valve fully open on both hot and cold• Have got these in a bank, if so, is the inlet pipes been sized correctly• Has the laminar flow control been installed• High pressure exceeding the plumbing code will have an effect on the product and must not exceed 500kPa• Ensure the flexi hose is not kinked/ twisted

Problem	Cause	How to Fix
Not enough water	<ul style="list-style-type: none"> Taps installed in a bank or a trough 	<ul style="list-style-type: none"> Ensure the main pipe size is sized correctly to ensure adequate water is able to service the taps installed in a bank or a trough
The tap is leaking	<ul style="list-style-type: none"> Debris 	<ul style="list-style-type: none"> Have you flushed your water lines If rubbish has gone through the cartridge, there is a high chance Tighten cartridge lock nut
No water	<ul style="list-style-type: none"> Isolating valve is off 	<ul style="list-style-type: none"> Ensure the Isolating valve is turned on
No water is coming out of the spray	<ul style="list-style-type: none"> Washer may be crushed during installation 	<ul style="list-style-type: none"> We recommend that you turn the mixer handle to the off position and dismantle the hose from the riser, check the sealing washer is not crushed, turn on the water slightly to make sure water is coming out. Then if so, repeat the install process, put the sealing washer flat then apply lock seal tape and fit again in position, and then check for leaks and or to make sure the water is now spraying out of the spray
Which side should I install the handle on	<ul style="list-style-type: none"> Left or middle 	<ul style="list-style-type: none"> It is highly recommended to install the handle on the right-hand side, indicator will be correct and the handle will not be in the way of pots and pans and will alleviate any damages to the cartridge
Hose is blown or leaking	<ul style="list-style-type: none"> Tap not turned off when not in use 	<ul style="list-style-type: none"> It is recommended, especially if pressure exceed manufacturer's recommendations and the plumbing code of Australia
Do I need to install the wall bracket	<ul style="list-style-type: none"> What would happen if I don't 	<ul style="list-style-type: none"> The weight bearing will affect the unit, it is very important to install the wall bracket at all times
Can I mount product through racks	<ul style="list-style-type: none"> What would happened if I do 	<ul style="list-style-type: none"> If the product is mounted through racks, then the risk of the user damage to the unit is high. The product must be clear of obstructions to avoid any damages to the product
How often do I need to service my tap	<ul style="list-style-type: none"> Prevent product failure 	<ul style="list-style-type: none"> Service and maintenance of the main operating parts is recommended as this will prolong the life of the product

USER MANUAL

Water Quality

Maximum chloride Cl- level Guidelines in plumbing systems

	Cold Water	Hot Water
Grade 304L	200	50
Grade 316L	1000	250

When materials may be used in either hot or cold water lines, the guidelines for hot water should be used.

Within these guidelines at ambient temperatures and provided the pH >~6, any negative effect to stainless steel will be unlikely.

Note: Chlorides in water - where the density of the solvent (water) is 1 (which it is to within 0.1% at ambient temperatures), then mg/L = ppm.

For brass products, please ensure the chlorine and chloramines levels are not more than 0.4 ppm.
Please ensure that the water quality supplied to the fixtures meets safe drinking standards to prevent potential staining of the product.

Chlorine guidelines (not to be confused with chloride)

- 304L suitable for chlorine levels up to 2ppm.
- Short term dosing, for example 25-50ppm, for sterilisation purposes of 24-48 hours acceptable if effectively flushed through afterwards.
- Sterilisation is essential during commissioning of potable water systems.

Gentec products come with a Manufacturer's Warranty. To ensure the validity of this warranty, Gentec products must be installed following the provided installation instructions and adhering to AS 3500, NCC Volume Three, relevant Australian Standards, and any local authority requirements applicable to the product. Additionally, water and electrical supply conditions must meet the appropriate national and/or state standards. Non-compliance with these provisions may void the warranty and impact product performance.

Note: The information provided is only a guide, actual product may differ. The information here should not be relied on without clarification with Gentec. Gentec reserves the right to make design changes at any time without notification.
